

ABSTRACT OF THE DISCLOSURE

A touch language to be used by handicapped persons, such as deaf people, blind people, and deafblind people, is provided by the present invention. A method for communicating visual images, such as those of a television program, to a handicapped person comprises the steps of providing at least one device for physically transmitting information about the visual images to the handicapped person and delivering a key word describing a portion of the visual images to the handicapped person using the at least one device.
